Fernandina Beach, Fla. — The Florida Department of Health in Nassau County (DOH-Nassau) urges residents to avoid contact with wild and stray animals to protect themselves from the risk of rabies exposure after a raccoon in the western part of the county tested positive for rabies.

Rabies is endemic in Florida, and all residents and visitors in Nassau County should be aware that rabies is present in the wild animal population throughout the county. Domestic animals are at risk if not vaccinated. In Florida, raccoons, bats, foxes, and unvaccinated cats are the animals most frequently diagnosed with rabies. Other animals that are at high risk for rabies include skunks, otters, coyotes, bobcats, and stray or unvaccinated dogs and ferrets.

“Rabies is a potentially fatal disease. It is important not to handle wild animals, to be aware of unusual acting animals, and to keep pets vaccinated against rabies,” said Dr. Eugenia Ngo-Seidel, Director, DOH-Nassau.

Rabies is transmitted through exposure to the saliva and nervous tissue from a rabid animal through a bite, scratch, or contact with mucous membranes such as the eyes, nose, or mouth. DOH-Nassau works with Nassau County Animal Services and the Nassau Humane Society in responding to incidents of animal bites, tests animals for rabies through the Department of Health state laboratory, and quarantines animals as necessary. DOH-Nassau also provides rabies vaccinations to victims of animal bites, the only known effective treatment for rabies prevention in humans.

The following are steps you can take to protect yourself and your loved ones against rabies:

- Call your local animal control agency to remove any stray animals from your neighborhood. Nassau Humane Society is the animal control agency for the City of Fernandina Beach, and Nassau County Animal Services is the agency for all other parts of the county.
- Keep rabies vaccinations up to date for all pets.
- Keep your pets under direct supervision so they do not come in contact with wild animals. If your pet is bitten by a wild animal, seek veterinary assistance for the animal immediately and contact Nassau County Animal Services at 904-530-6150, or the Nassau Humane Society at 904-491-0122 for incidents in the city of Fernandina Beach.
- Spay or neuter your pets to help reduce the number of unwanted pets that may not be properly cared for or regularly vaccinated.
- Outdoor feeding can attract animals such as feral cats, raccoons, and coyotes. Do not handle, feed, or unintentionally attract wild animals with open garbage cans or litter.

- Never adopt wild animals or bring them into your home.
- Teach children never to handle unfamiliar animals, wild or domestic, even if they appear friendly.
- Prevent bats from entering living quarters or occupied spaces in homes, churches, schools, and other similar areas, where they might come in contact with people and pets.

Unusual acting animals should be reported to the Nassau Humane Society at 904-491-0122 in the city of Fernandina Beach, or to Nassau County Animal Services at 904-530-6150 for those in other areas of the county. Anyone who is bitten or scratched by a wild animal or stray should report the incident to their doctor immediately, as well as their local animal control agency and DOH-Nassau. To report an animal bite to DOH-Nassau, call 904-875-6100.
